

Shakayet Hossain

Backend Developer

+8801869943362 | shakayet.dev@gmail.com

GitHub | LinkedIn | Portfolio

Summary

Backend Engineer with experience building scalable, production-ready backend systems using Node.js, TypeScript, MongoDB, PostgreSQL, Redis, and cloud infrastructure. Skilled in API architecture, real-time systems, payment integrations, and performance optimization. Proven track record leading backend teams, delivering enterprise-grade solutions, and improving system reliability through modern DevOps and observability practices.

Skills

Programming Languages

TypeScript, JavaScript (ES6+), Python, C, C++

Backend & APIs

Node.js (Express.js), REST API Design, WebSockets (Socket.IO), Swagger/OpenAPI, JWT/OAuth Authentication, Webhook Integration

Real-time Communication

Socket.IO, Agora, WebRTC Concepts

Architecture & Performance

BullMQ, RabbitMQ, Queue Processing, Redis Caching

Cloud & DevOps

Docker, Nginx, PM2, AWS (EC2, S3, CloudFront), CI/CD, DigitalOcean, Cloudflare, GitHub Actions

Databases & Storage

MongoDB (Mongoose), PostgreSQL (Prisma), MySQL, Redis

Payments & Integrations

Stripe, PayPal, Google Pay, Apple Pay, QuickBooks

Testing & Monitoring

Jest, Supertest, Postman, Structured Logging

Security & Validation

JWT, bcrypt, CORS, Rate Limiting, Zod

Tools & Workflow

Git, GitHub, GitLab, Jira, ClickUp, Figma, ESLint, Prettier

Experience

Team Lead / Jr. Backend Developer

April 2024 – Present

SparkTech Agency

- Led a backend engineering team to deliver multiple complex projects on schedule while mentoring junior developers and maintaining engineering quality standards.
- Architected scalable backend systems using Node.js, Express.js, MongoDB, and Redis with focus on maintainability and high performance.
- Established development best practices including code reviews, modular architecture, automated testing, and CI/CD workflows.
- Improved API response times and scalability through database optimization, Redis caching, and asynchronous job processing.
- Built and maintained containerized deployment pipelines using Docker, GitHub Actions, PM2, and Nginx.
- Collaborated directly with clients to gather requirements, define technical solutions, and ensure successful project delivery.

- Managed high-priority enterprise projects while coordinating cross-functional teams and stakeholder communication.

Achievements

ICPC Dhaka Regional Rank: 86	2021
ICPC Dhaka Regional Rank: 54	2022
ICPC Dhaka Regional Rank: 104	2023

Education

B.Sc. in Computer Science & Engineering National University (Tejgaon College) Cumulative GPA: 3.54 / 4.00	09/2018 – 07/2024
--	-------------------

Leadership & Activities

President Programming Club, Tejgaon College	09/2018 – 07/2024
---	-------------------

- Organized a two-day CSE Fest and multiple programming workshops focused on problem solving and STL fundamentals.
- Mentored students for ICPC and NCPC preparation, helping build a competitive programming culture within the college.
- Conducted regular problem-solving sessions and collaborative learning activities for club members.

Projects

Schaefer-tutoring (Online Learning Platform)	Live Link GitHub
---	--

- Engineered a scalable real-time LMS platform using Node.js, Express.js, TypeScript, MongoDB, Redis, and Socket.IO.
- Developed live tutoring infrastructure with real-time messaging, session presence tracking, instant notifications, and WebSocket-based communication.
- Integrated Stripe subscription billing with automated invoices, webhook handling, recurring payments, and secure checkout workflows.
- Optimized backend memory using Redis caching, Bull queue workers, cron jobs, and asynchronous background processing.
- Designed secure REST APIs with JWT authentication, role-based access control (RBAC), rate limiting, and Zod validation.
- Implemented observability and monitoring using OpenTelemetry tracing, structured logging, and centralized error tracking.
- Containerized deployment workflows using Docker, PM2, Nginx, and GitHub Actions CI/CD pipelines.

B2B Marketplace

[Live Link](#) [GitHub](#)

- Built a production-grade B2B produce marketplace backend enabling inventory management, bulk ordering, and credit-based purchasing workflows.
- Designed scalable product, category, and banner management systems with automated stock tracking and inventory synchronization.
- Integrated QuickBooks Online APIs for real-time synchronization of customers, invoices, products, and accounting data.
- Developed an advanced buyer credit system with automated balance calculations, payment tracking, and order validation logic.
- Implemented Firebase Cloud Messaging (FCM) for real-time push notifications related to orders, inventory updates, and account activities.
- Secured backend services using JWT authentication, RBAC authorization, request validation, and modular API architecture.
- Improved deployment reliability and scalability using PM2 cluster mode, structured logging, and production-ready server configurations.

AutoParts E-commerce Marketplace

[Live Link](#) [GitHub](#)

- Developed a scalable multi-vendor auto-parts marketplace backend using Node.js, Express.js, MongoDB, and TypeScript.
- Designed vendor and customer workflows including product management, order handling, cart systems, and inventory operations.
- Implemented secure dual-token JWT authentication, OTP email verification, password recovery, and protected API access control.
- Integrated AWS S3 and CloudFront CDN for scalable media uploads, optimized asset delivery, and improved application performance.
- Built real-time notification and order update systems using Socket.IO for enhanced customer engagement.
- Maintained a clean and modular architecture with reusable services, ESLint, Prettier, and scalable project structure standards.
- Configured production deployment environments using PM2, Nginx, environment-based configurations, and logging utilities.
